HR tech firm PeopleStrong to integrate GenAI

By integrating GenAI, the firm aims to harness advanced intelligence to simplify tasks, including generating OKRs, coaching new joiners with nudges, creating comprehensive reports, and offering recommendations drawn from existing enterprise-wide people data

PeopleStrong, an HR tech platform, will integrate generative AI (GenAI) across the entire employee lifecycle.

By integrating GenAI, the firm aims to harness advanced intelligence to simplify tasks, including generating OKRs, coaching new joiners with nudges, creating comprehensive reports, and offering recommendations drawn from existing enterprise-wide people data.

Including performance management, succession planning, and core HR, the firm offers a range of advanced applications. Empowering employees to plan careers and access skill-enhancing courses, the company enables AI-generated goal setting and democratizes HR with talent

coaching.
